Facility Operator and General Manager
Myron Harrison
Owner and Registered Agent
Gold Coast Recycling & Transfer Station, Inc.,
5275 Colt Street, Suite 2
Ventura, CA 93004

**Re: Notice of Violations and Intent to File Suit Under the Federal Water
Pollution Control Act (Clean Water Act)**

Dear Owners, Operators, and Site Managers:

NOTICE

This Notice is provided on behalf of California River Watch (“River Watch”) in regard to violations of the Clean Water Act (“CWA” or “Act”) 33 U.S.C. § 1251 *et seq.*, that River Watch believes are occurring at the Gold Coast Recycling & Transfer Station, Inc., (“Gold Coast”) facility located at 5275 Colt Street in Ventura, California. Notice is being sent to you as the responsible owners, operators, lessees and/or managers of this facility and real property. This Notice addresses the violations of the CWA, including violation of the terms of the General California Industrial Storm Water Permit, and the unlawful discharge of pollutants into the Ventura Municipal Separate Storm Sewer System (“Ventura MS4”), which discharges to the Pacific Ocean.

CWA § 505(b) requires a citizen to give notice of the intent to file suit sixty (60) days prior to the initiation of a civil action under Section 505(a) of the Act. Notice must be given to the alleged violator, the U.S. Environmental Protection Agency (“EPA”), and the state in which the violations occur.

As required by the CWA, this Notice provides notice of the violations that have occurred, and continue to occur at the Gold Coast facility. Consequently, George Harrison, Myron Harrison and Gold Coast Recycling & Transfer Station, Inc., (collectively referred to hereafter as the “Discharger”) is placed on formal notice by River Watch that after the expiration of sixty (60) days from the date of this Notice, River Watch will be entitled to bring suit in the United States District Court against the Discharger for continuing violations of an effluent standard or limitation, National Pollutant Discharge Elimination System (“NPDES”) permit condition or requirement, or Federal or State Order issued under the CWA (in particular, but not limited to, CWA § 301(a), § 402(p), and § 505(a)(1), as well as the failure to comply with requirements set forth in the Code of Federal Regulations and the Los Angeles Regional Water Quality Control Board (“RWQCB”) Water Quality Control Plan or “Basin Plan.”

The CWA requires that any Notice regarding an alleged violation of an effluent standard or limitation or of an order with respect thereto shall include sufficient information to permit the recipient to identify the following:

1. *The specific standard, limitation, or order alleged to have been violated.*¹

To comply with this requirement, River Watch notices the Discharger of ongoing violations of the substantive and procedural requirements of CWA § 402(p) and violations of NPDES Permit No. CAS000001, State Water Resources Control Board, Order No. 92-12-DWQ as amended by Order No. 97-03-DWQ (the “General Permit”) relating to the recycling services at the Gold Coast facility.

The Discharger filed a Notice of Intent (“NOI”) agreeing to comply with the terms and conditions of the General Permit. The State Water Resources Control Board approved the NOI on or about April 6, 1992, and the Discharger was assigned Waste Discharger Identification (“WDID”) number 4 56I004467. River Watch contends that in the operation of the Gold Coast facility, the Discharger has failed and is failing to comply with the terms and conditions of the General Permit requiring the preparation, implementation, review and update of an adequate Storm Water Pollution Prevention Plan (“SWPPP”), the elimination of all non-authorized storm water discharges, and the development and implementation of an adequate monitoring and reporting program.

Compliance with the monitoring and reporting program is central to the effectiveness

¹These violations are in addition to those identified by the RWQCB in its July 19, 2011 “Second Notice of Violations: The National Pollutant Discharge Elimination System (NPDES) General Permit For Storm Water Discharges Associated With Industrial Activity (Order No. 97-03-DWQ; CAS000001) WDID No. 456 I 004467” addressing the Gold Coast facility’s failures to maintain an adequate SWPPP, implement effective BMPs, and comply with mandated sampling requirements.

of the General Permit program. The Discharger, however, has failed and is failing to comply with the following General Permit requirements as presumably detailed in the Annual Reports submitted in reporting years 2008-2009 through 2012-2013:

a. Sampling and Analysis Results Were Incorrectly Provided in the 2008-2009, 2009-2010, 2010-2011, 2011-2012, and 2012-2013 Annual Reports²

The Annual Report form, in the Section titled *Specific Information*, “Monitoring and Reporting Program,” E. Sampling and Analysis Results, identifies the following violations:

Subparagraph 1. specifically questions “How many storm events did you sample?” Under Section B.5 of the General Permit, two (2) storm water samples are required. The Discharger, which concedes in Section D.1 of the Annual Report Form that it is not “exempt” from collecting and analyzing samples from two storm events, provides sampling results from only one storm water event per year during the Annual Reporting Permit years 2010-2011, 2011-2012 and 2012-2013. The Discharger’s repeated “explanation” on each of the three Annual Reports is that “there was only one qualifying storm event.”

b. SWPPP and Monitoring Program Requirements Were Not Properly Prepared and Implemented in the 2010-2011, 2011-2012 and 2012-2013 Annual Reporting Years

The Annual Report form, in the Section titled *Specific Information*, “Annual Comprehensive Site Compliance Evaluation (ACSCE),” H. ACSCE Checklist, Subparagraph 2, asks “Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas?” Assuming the Discharger has prepared a SWPPP, it fails to ensure that the BMPs address the elimination of the pollutant discharges identified in the Discharger’s Laboratory Analyses as alleged in paragraph c. below.

c. Noncompliance with General Permit Storm Water Controls in the 2010-2011, 2011-2012 and 2012-2013 Annual Reporting Years

The Annual Report form, in the Section titled *Specific Information*, “Annual Comprehensive Site Compliance Evaluation (ACSCE),” I. ACSCE Evaluation Report, requires “[t]he facility operator ... to provide an evaluation report that includes ... any incidents of non-compliance and the corrective actions taken.” The Discharger allegedly

²Neither the 2008-2009 nor the 2009-2010 Annual Report were included in the documents provided by the RWQCB to River Watch 8 in response to its March 18, 2014 Public Records Act request, nor were they available on or before the date of this Notice at the State Water Resources Control Board on-line “Water Boards Storm Water Multiple Application & Reporting Tracking System” (<https://www.smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.jsp>). The 2013-2014 Annual Report was also not available on “SMARTS” on or before the date of this Notice.

failed and is failing to eliminate the reported ongoing discharges from the Gold Coast facility that exceed EPA “Benchmarks” for the following pollutants:

- 2012-2013 Reporting Year³

pH - SW-1: 5.8
SW-3: 5.8
SW-4: 5.8
SW-7: 5.6

TSS - SW-2: 121 mg/L
SW-3: 162 mg/L

d. Certification of Compliance With General Permit for 2008-2009 through 2012-2013 Annual Reporting Years

The Annual Report form, in the Section titled *Specific Information*, “Annual Comprehensive Site Compliance Evaluation (ACSCE),” I. ACSCE Certification requires facilities covered under the General Permit to state “[b]ased on your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?” The alleged failures to fully and accurately ensure compliance with the requirements of the General Permit as detailed above contradicts both the ACSME Certification” and the signed “Annual Report Certification,” which provides that the signer of the Annual Report attests that the “information submitted is, to the best of my knowledge and belief, true, accurate and complete.”

2. *The activity alleged to constitute a violation.*

The Discharger’s scrap recycling operations (classified under SIC Code 5093) include the acceptance of newspapers, glass containers, plastic containers, metal containers, cardboard, magazines, paper/junk mail, ABOP (antifreeze, batteries, oil and paint), and E-waste (computer and computer monitors, televisions, printers, cell phones, consoles and big screen TVs, fax machines, VCRs, small kitchen appliances, and fluorescent and high intensity lamps) (<http://www.goldcoastrecycling.com/index.htm>). The work at the Gold Coast facility is conducted both indoors and outdoors. Because the property on which the Gold Coast facility is located is subject to rain events, and because there is no RWQCB exemption from the collecting and analyzing the range of pollutants identified above, there can be a discharge of these pollutants, measured at the point the discharge enters into the Ventura MS4, which discharges to the Pacific Ocean.

To properly regulate these activities and control the discharge of these types of pollutants, the State Water Resources Control Board requires industrial facilities to obtain and comply with the terms and conditions of an individual NPDES permit or seek coverage under the General Permit (or obtain a proper exemption under the terms of the General Permit from its requirements). Review of the public record by River Watch reveals that the Discharger obtained coverage under the General Permit but fails to comply with its environmentally protective requirements, in particular the implementation of effective BMPs.

3. *The person or persons responsible for the alleged violation.*

The persons responsible for the alleged violations are George Harrison, Myron Harrison, Gold Coast Recycling & Transfer Station, Inc. collectively referred to herein as the

Discharger, and those other persons who hold an ownership or operating interest in the Gold Coast facility.

4. *The location of the alleged violation.*

The location or locations of the various violations is the permanent address of the Gold Coast facility at 5275 Colt Street in Ventura, California, including the waters of the Pacific Ocean.

5. *The date or dates of violation or a reasonable range of dates during which the alleged activity occurred.*

The range of dates covered by this Notice is from August 13, 2009 to August 13, 2014. River Watch will from time to time further update this Notice to include all violations which occur after the range of dates covered by this Notice. Some of the violations are continuous in nature, therefore each day constitutes a violation.

6. *The full name, address, and telephone number of the person giving notice.*

The entity giving notice is California River Watch, 290 S. Main Street, #817, Sebastopol, CA 95472 – a non-profit corporation organized under the laws of the State of California, dedicated to protect, enhance and help restore the groundwater and surface water environs of California including, but not limited to, its rivers, creeks, streams, wetlands, vernal pools, and tributaries.

River Watch may be contacted via email: US@ncriverwatch.org. or through its attorneys. River Watch has retained legal counsel with respect to the issues set forth in this Notice. All communications should be addressed to:

David Weinsoff, Esq.

Tel. 415-460-9760
Email: lh28843@sbcglobal.net

STATUTORY BACKGROUND

CWA § 301(a), 33 U.S.C. § 1311(a), prohibits the discharge of any pollutant into waters of the United States unless such discharge is in compliance with various enumerated sections of the Act. Among other things, Section 301(a) prohibits discharges not authorized

by, or in violation of, the terms of an individual NPDES permit or a general NPDES permit issued pursuant to CWA § 402(p), 33 U.S.C. § 1342. CWA § 402(p), 33 U.S.C. § 1342(p), establishes a framework for regulating storm water discharges under the NPDES program. States with approved NPDES permitting programs are authorized under this section to regulate storm water discharges through permits issued to dischargers and/or through the issuance of a single, statewide general permit applicable to all storm water dischargers. Pursuant to CWA § 402, the Administrator of the U.S. EPA has authorized California's State Water Resources Control Board to issue NPDES permits including general NPDES permits in California.

The State Water Resources Control Board elected to issue a statewide general permit for industrial discharges, and issued the General Permit on or about November 19, 1991, modified the General Permit on or about September 17, 1992, and reissued the General Permit on or about April 17, 1997, pursuant to CWA § 402(p).

In order to discharge storm water lawfully in California, industrial dischargers must comply with the terms of the General Permit or have obtained an individual NPDES permit and complied with its terms.

The General Permit contains certain absolute prohibitions. Discharge Prohibition Order Section A(1) of the General Permit prohibits the direct or indirect discharge of materials other than storm water ("non-storm water discharges"), which are not otherwise regulated by a NPDES permit, to waters of the United States. Discharge Prohibition Order Section A(2) prohibits storm water discharges and authorized non-storm water discharges that cause or threaten to cause pollution, contamination, or nuisance. Receiving Water Limitation Order Section C(1) prohibits storm water discharges to any surface or groundwater that adversely impact human health or the environment. Receiving Water Limitation Order Section C(2) prohibits storm water discharges that cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Quality Control Board Basin Plan.

In addition to absolute prohibitions, the General Permit contains a variety of substantive and procedural requirements that dischargers must meet. Facilities discharging, or having the potential to discharge, storm water associated with industrial activity that have not obtained an individual NPDES permit must apply for coverage under the General Permit by filing a NOI. The General Permit requires existing dischargers to file NOIs before March 30, 1992.

Dischargers must also develop and implement a SWPPP which must comply with the standards of BAT and BCT. The SWPPP must, among other requirements:

- Identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm and non-storm water discharges from the facility and identify and implement site-specific BMPs to reduce or prevent pollutants associated with industrial activities in storm water and authorized non-storm water discharges [Permit Section A(2)]. BMPs must implement BAT and BCT [Permit Section B(3)].
- Include a description of individuals and their responsibilities for developing and implementing the SWPPP [Permit Section A(3)]; a site map showing the facility boundaries, storm water drainage areas with flow pattern and nearby water bodies, the location of the storm water collection, conveyance and discharge system, structural control measures, impervious areas, areas of actual and potential pollutant contact, and areas of industrial activity [Permit Section A(4)]; a list of significant materials handled and stored at the site [Permit Section A(5)]; and, a description of potential pollutant sources including industrial processes, material handling and storage areas, dust and particulate generating activities, and a description of significant spills and leaks, a list of all non-storm water discharges and their sources, and a description of locations where soil erosion may occur [Permit Section A(6)].
- Include a narrative assessment of all industrial activities and potential pollutant sources at the facility [Permit Section A(7)]. Include a narrative description of the BMPs to be implemented at the facility for each potential pollutant and its source, and consider both non-structural BMPs (including “Good Housekeeping”) and structural BMPs where non-structural BMPs are not effective [Permit Section A(8)].
- Conduct one comprehensive site compliance evaluation by the facility operator in each reporting period (July 1- June 30), with SWPPP revisions made, as appropriate, and implemented within 90 days of the evaluation [Permit Section A(9)].

The General Permit requires dischargers to eliminate all non-storm water discharges to storm water conveyance systems other than those specifically set forth in Special Condition D(1)(a) of the General Permit and meeting each of the conditions set forth in Special Condition D(1)(b).

As part of their monitoring program, dischargers must identify all storm water discharge locations that produce a significant storm water discharge, evaluate the effectiveness of BMPs in reducing pollutant loading, and evaluate whether pollution control measures set out in the SWPPP are adequate and properly implemented. Dischargers must

conduct visual observations of these discharge locations for at least one storm per month during the wet season (October through May) and record their findings in their Annual Report [Permit Section B(14)]. Dischargers must also collect and analyze storm water samples from at least two storms per year in compliance with the criteria set forth in Permit Section B(5). Dischargers must also conduct dry season visual observations to identify sources of non-storm water pollution in compliance with Permit Section B(7).

Permit Section B(14) of the General Permit requires dischargers to submit an “Annual Report” by July 1 of each year to the executive officer of the relevant Regional Water Quality Control Board. Permit Section A(9)(d) of the General Permit requires the dischargers to include in the annual report an evaluation of the dischargers’ storm water controls, including certifying compliance with the General Permit. *See also* Permit Sections C(9), C(10) and B(14).

The EPA has established Parameter Benchmark Values (“EPA Benchmarks”) as guidelines for determining whether a facility discharging storm water has implemented the requisite BAT and BCT. (65 Fed. Reg. 64746, 64767 (Oct. 30, 2000)). California Toxics Rule (“CTR”) limitations are also applicable to all non storm water and storm water discharges. (40 C.F.R. part 131).

The RWQCB has established applicable water quality standards. This Basin Plan includes a narrative toxicity standard and a narrative oil and grease standard. The Basin Plan provides that “[w]aters shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.” The Basin Plan establishes limits on metals, solvents, pesticides and other hydrocarbons.

VIOLATIONS

River Watch contends that between August 13, 2009 and August 13, 2014 the Discharger violated the CWA, the Basin Plan and the Code of Federal Regulations by discharging pollutants from the Gold Coast facility to waters of the United States without an individual NPDES permit, or in violation of the General Permit.

The violations discussed herein are derived from eye witness reports and records publicly available, or records in the possession and control of the Discharger. Furthermore, River Watch contends these violations are continuing.

Finally, River Watch also believes that the Gold Coast facility is not operated to ensure that storm and non-storm water discharges are properly contained, controlled, and/or monitored. As a result, the Discharger fails to follow the requirements of the General Permit

in its sampling protocols for the Gold Coast facility by failing to accurately capture “first flush” samples and failing to properly sample from all the outfalls of the facility.

REMEDIAL MEASURES REQUESTED

River Watch believes that implementation of the following remedial measures are necessary in order to bring the Discharger into compliance with the CWA and reduce the biological impacts of its non-compliance upon public health and the environment surrounding the Gold Coast facility:

1. Prohibition of the discharges of pollutants including, but not limited to, petroleum hydrocarbons, oil and grease, accumulated particulate matter, BOD, TSS, heavy metals (including aluminum, iron, lead, copper and zinc) from the “refuse systems” operated at the Gold Coast facility.
2. Compliance with the terms and conditions of the General Permit, and BMPs detailed in the EPA’s Industrial Stormwater Fact Sheet Series, “Sector N: Scrap Recycling and Waste Recycling Facilities” (EPA Office of Water, EPA-833-F-06-029, December 2006; (www.epa.gov/npdes/pubs/sector_n_scraprecycling.pdf).
3. Compliance with the storm water sampling, monitoring and reporting requirements of the General Permit.
4. Sampling of storm water at least four (4) times per year over each of the next five (5) years: at “first flush”; the first significant rain after “first flush”; the first significant rain after April 1; and the second significant rain after April 1.
5. 100% of the discharge from the Gold Coast facility must be discharged through discrete conveyances.
6. Any discharge from the Gold Coast facility to a water of the United States must be sampled during the four (4) sampling events identified in paragraph #4 above.
7. Preparation and submittal to the RWQCB of a “Reasonable Potential Analysis” for the Gold Coast facility and its operations.
8. Preparation of an updated SWPPP including a monitoring program, with a copy provided to River Watch.

CONCLUSION

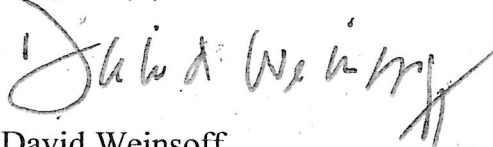

CWA §§ 505(a)(1) and 505(f) provide for citizen enforcement actions against any "person," including individuals, corporations, or partnerships, for violations of NPDES permit requirements and for un-permitted discharges of pollutants. 33 U.S.C. §§ 1365(a)(1) and (f), § 1362(5). An action for injunctive relief under the CWA is authorized by 33 U.S.C. § 1365(a). Violators of the Act are also subject to an assessment of civil penalties of up to \$37,500 per day/per violation for all violations pursuant to Sections 309(d) and 505 of the Act, 33 U.S.C. §§ 1319(d), 1365. *See also* 40 C.F.R. §§ 19.1-19.4.

The violations set forth in this Notice effect the health and enjoyment of members of River Watch who reside and recreate in the affected community. Members of River Watch use the affected watershed for recreation, sports, fishing, swimming, hiking, photography, nature walks and the like. Their health, use and enjoyment of this natural resource is specifically impaired by the Discharger's violations of the CWA as set forth in this Notice.

River Watch believes this Notice sufficiently states grounds for filing suit. At the close of the 60-day notice period or shortly thereafter River Watch has cause to file a citizen's suit under CWA § 505(a) against the Discharger for the violations of the CWA described in this Notice.

During the 60-day notice period, River Watch is willing to discuss effective remedies for the violations identified in this Notice. However, if the Discharger wishes to pursue such discussions in the absence of litigation, it is suggested those discussions be initiated soon so that they may be completed before the end of the 60-day notice period. River Watch does not intend to delay the filing of a lawsuit if discussions are continuing when the notice period ends.

Very truly yours,

David Weinsoff
